

Where's Waldo

Week 1
June 6-9, 2011

Whether a map is of a classroom, a city, a plant, or the universe, the same basic knowledge is required: scale, orientation, angles and measurement. Maps tell us which direction to travel and the distance between objects. How does map quest work?

Set out on a scavenger hunt around your classroom, school or the neighborhood, or map the sky starting with the big dipper.

Dig into Greek mythology and the zodiac constellation to top off your mapping expedition.

Middle School Emphasis:
Using Google earth, investigating GPS
